Executive Reasoning

- Final recommendation is 'Hold/Watch' with a composite score of 3.51/5.00 (Mixed band).
- Top strengths are Peer Relative (4.62/5), Risk Fit (4.10/5).
- Primary watch items are Business Quality (2.90/5), Valuation (2.00/5).
- Growth profile: revenue growth 30.7% and EPS growth 103.0% indicate the current fundamental momentum trend.
- Profitability profile: net margin 6.7% and ROIC N/A summarize operating efficiency and capital productivity.
- Valuation profile: P/E 33.95 and earnings yield 2.95% provide the current price-versus-earnings view.
- Risk profile: Sharpe 1.80, Sortino 2.64, and max drawdown -33.8% describe return quality and downside sensitivity.
- Peer context: analysis benchmarked against 10 peer symbols in the selected universe.
- Recommendation remains scenario-dependent and should be re-validated after earnings releases, guidance changes, or macro regime shifts.

Celestica Inc. operates in Technology / Unknown with primary listing on N/A and country exposure to N/A.

Current scale appears at market capitalization of \$28.69B and peer universe size of 10 symbols.

Profitability indicators show net margin 6.7% and ROIC N/A, providing context for business quality and capital efficiency.

Growth indicators show revenue growth 30.7% and EPS growth 103.0%, informing earnings momentum quality.

Risk-adjusted behavior includes Sharpe 1.80, Sortino 2.64, and drawdown -33.8% versus benchmark SPY.

Valuation indicators (P/E 33.95, earnings yield 2.95%) are used alongside operational quality to prevent single-metric bias.

Final recommendation is produced by weighted multi-factor scoring and should be revisited after earnings and major macro/sector events.

Metric Legend (Executive)

- Business Quality: durability, competitive positioning, and profitability strength.
- Fundamentals: growth trajectory + margin quality + balance-sheet resilience.
- Technicals: timing context from trend/momentum factors (RSI, ADX, OBV).
- Valuation: price attractiveness versus earnings and enterprise-value earnings power.
- Risk Fit: quality of returns under volatility and downside pressure.
- Relative Peer: cross-sectional rank against comparable investment alternatives.

Metric	What It Means	How To Read	Interpretation	Your Value
business_quality	Durability and quality of the business model.	Higher is better; weak means fragile economics.	Business quality measures company durability: scale, competitive standing, and profitability strength. Current reading is mixed.	2.90
fundamentals	Growth + margins + balance sheet strength.	Higher is better; weak suggests poor financial trajectory.	Fundamentals measure operating health: growth trend, profit efficiency, and balance-sheet resilience. Current reading is good.	4.00
technicals	Entry timing quality from trend/momentum behavior.	Higher is better for timing; lower implies weaker setup.	Technicals measure timing context: momentum and trend quality rather than long-term business value. Current reading is mixed.	3.10
valuation	How cheap/expensive the stock is versus fundamentals.	Higher is better (more attractive pricing).	Valuation measures price attractiveness: whether current price is expensive or reasonable versus earnings/cash flow. Current reading is weak.	2.00
risk_fit	How suitable the stock is for risk-adjusted portfolio fit.	Higher is better; weak means downside behavior is concerning.	Risk fit measures portfolio behavior: return quality relative to volatility and downside drawdowns. Current reading is good.	4.10
relative_peer_score	Ranking against peers and sector alternatives.	Higher is better; weak means better alternatives likely exist.	Relative peer score measures rank versus alternatives: how this stock performs against peers and sector proxies. Current reading is strong.	4.62
